

OCEANA GLASS

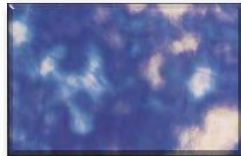

Now Made By Youghioghenny

OCEANA GLASS has been a popular art glass, especially on the west coast of the US. Limited production made this beautiful glass tough to get. Since Youghioghenny has restarted production of this glass on the east coast, supply is less of a problem. Oceana is used extensively for window and lampshade work, wherever natural coloration and shading are desired.

OCEANA MOTTLE GLASS has a soft feel with a wispy background showing between mottled areas. Many colors have highlights of red or yellow

300-SERIES SINGLE COLOR

cadmium orange and
green—fall foliage
CODE=A

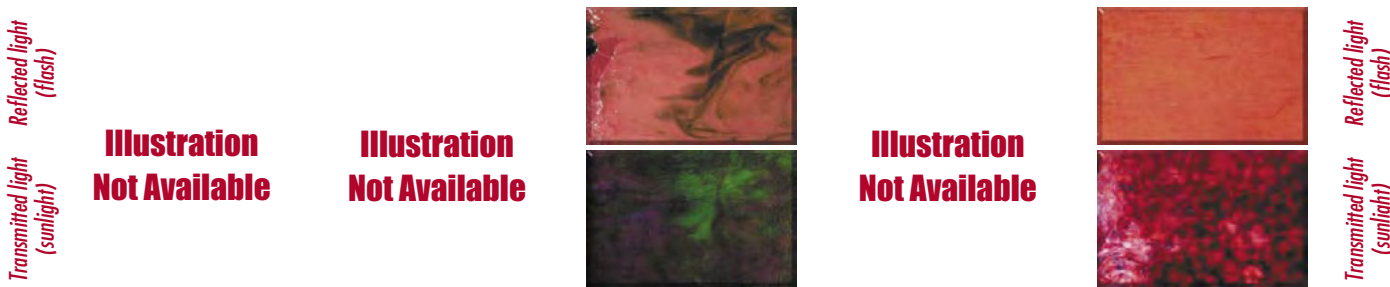

900-SERIES DICHROMIC OPALS Dichromic glass changes color and intensity as the light source varies. Oceana dichromic colors appear opalescent in reflected light (top picture), but burst into vivid streaky pink, red and yellow when lit from behind (bottom picture). Wonderful for window work. All combinations are made using either OG 900 or OG 910 as the base color. **NOTE:** Each picture shows the same piece of glass lit from the front with a camera flash and then backlit from the back with sunlight.
